Here We are providing the Five important use cases from our user research.

Use case 1 - Checking Weather Updates

Goal: To show how a farmer uses a weather app to plan their activities.

The Problem: Farmer looks worried, gazing at a dry field or stormy sky. Caption: "Unpredictable weather is destroying my crops!"

The Discovery: Farmer is introduced to the app (maybe by a younger family member or at a village kiosk). Caption: "I heard this app can help."

The Action: Farmer uses the app, showing a clear weather forecast (icons for sun, rain, etc.). Caption: "Let's check the forecast for the next week."

The Benefit: Farmer is shown taking action based on the forecast (e.g., irrigating before a dry spell, covering crops before rain). Caption: "Now I know when to water my fields!"

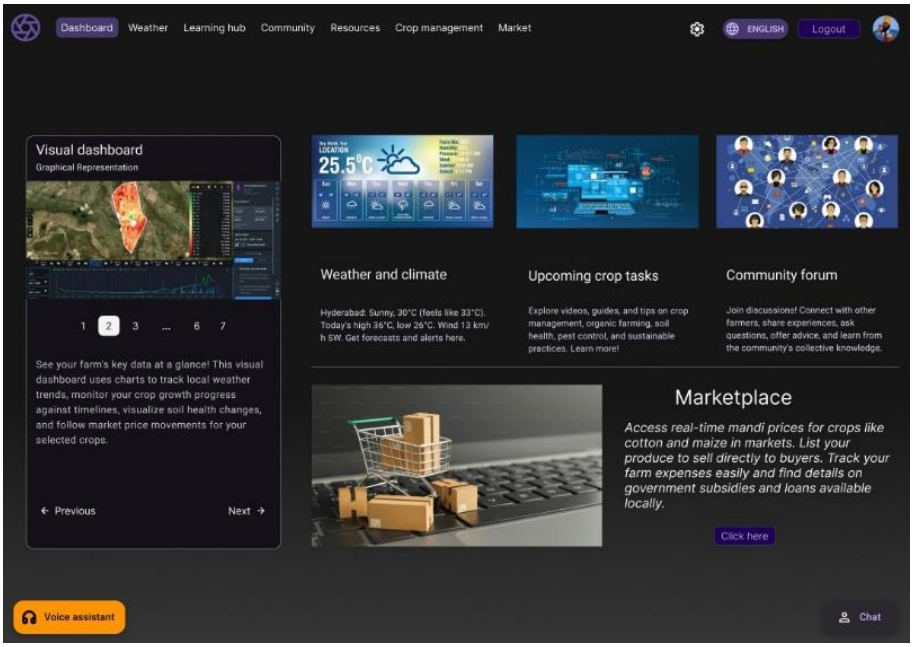

The Outcome: Farmer looks relieved and happy, with healthy crops. Caption: "Thanks to the app, my crops are safe."

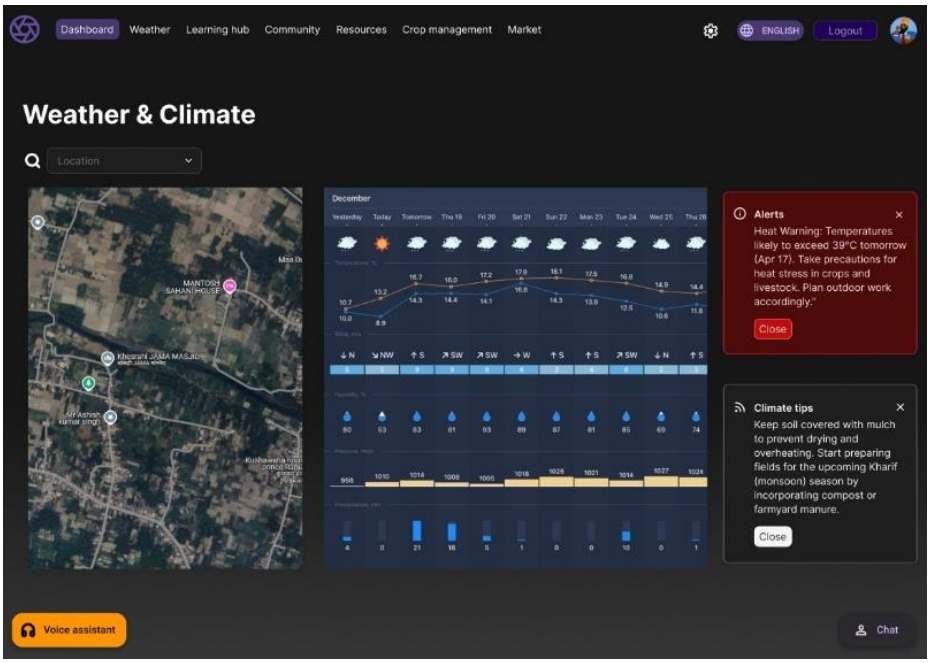

Key Elements:

App interface should be simple and in a local language.

Show the farmer's emotional journey from worry to confidence.

Emphasize the direct link between the forecast and the farmer's actions.

Use case 2 - Checking Market Price

Goal: To illustrate how farmers can get fair prices by using an app.

The Problem: Farmer looks sad, selling their produce to a middleman for a low price. The middleman looks greedy. Caption: "The trader is paying me very little for my harvest." (The Discovery): Farmer is introduced to the app (maybe by a younger family member or at a village kiosk). Caption: "I heard this app can help."

The Discovery: Farmer learns about a market price app (maybe at a farmer's meeting or through a government initiative). Caption: "My friend told me about an app that shows the latest market prices."

The Action: Farmer uses the app to check prices at different markets. The app shows clear price comparisons. Caption: "Let's compare the prices in different cities."

The Decision: Farmer decides where to sell their produce based on the app's information. Caption: "I'll take my produce to the city where I can get the best price."

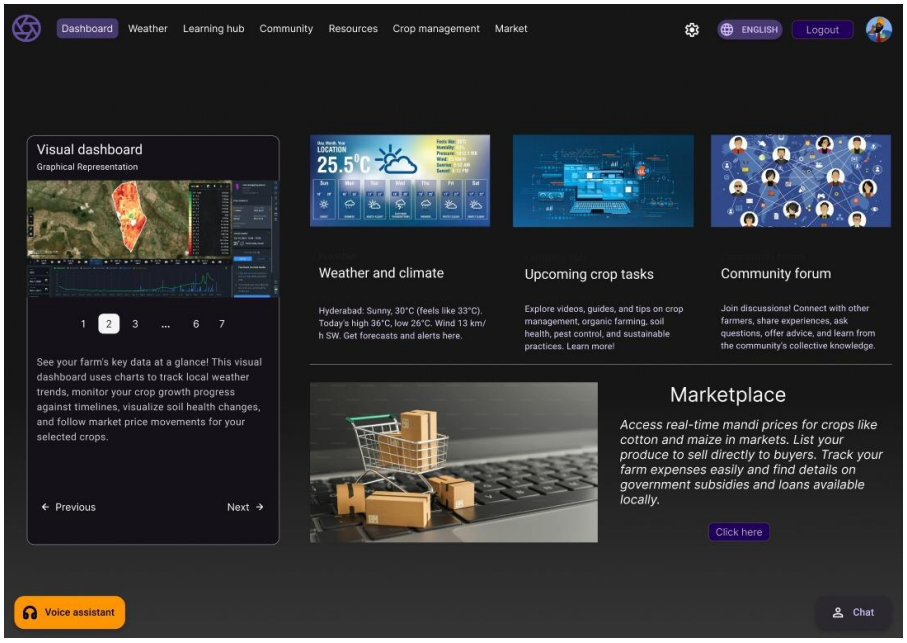

The Benefit: Farmer is shown selling their produce directly at a market and receiving a fair price. They look happy and satisfied. Caption: "I got a much better price this time, thanks to the app!"

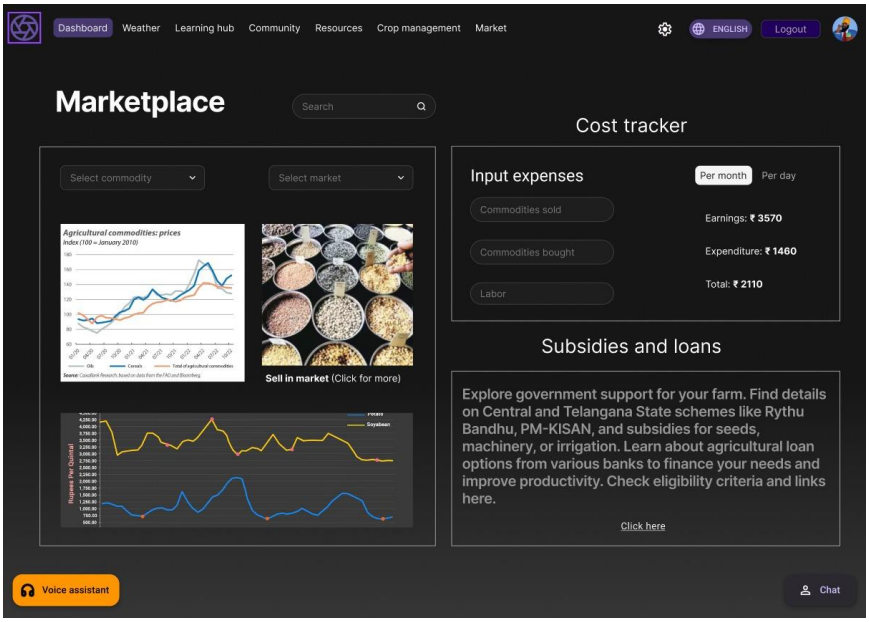

Key Elements:

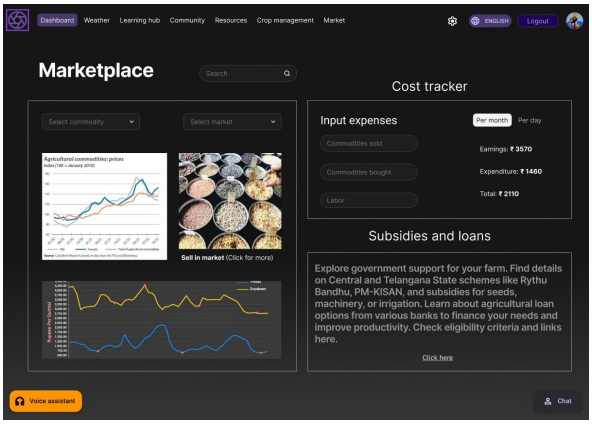

Clearly contrast the unfairness of the middleman with the fairness of the app.

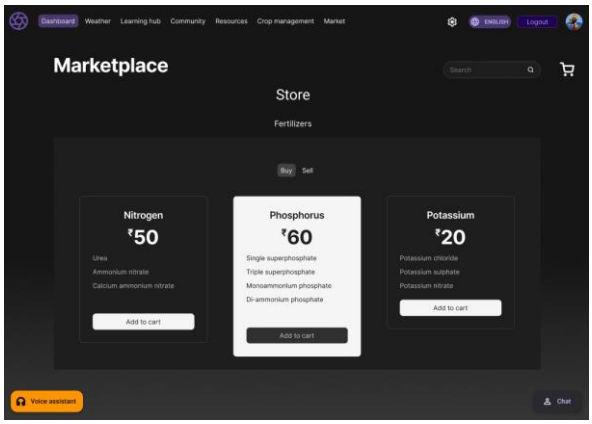

Show the app's interface with clear price information.

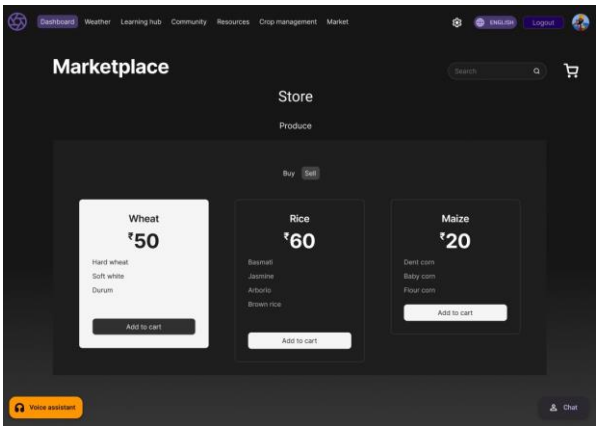

Emphasize the farmer's empowerment and increased income.

Use case 3 - SMS Alerts for Pest Control Using

Goal: To show the simplicity and effectiveness of SMS alerts for timely advice.

Storyboard Panels:

The Problem: Farmer is worried, inspecting their crops and finding pests. Caption: "Pests are attacking my crops, and I don't know what to do!"

The Alert: Farmer receives an SMS message on their basic mobile phone. Caption: "Beep! Beep! A message from the agriculture department."

The Information: The SMS message is shown clearly, with simple instructions on how to control the pests. Caption: "The message says I should use neem oil spray."

The Action: Farmer follows the instructions in the SMS message and sprays their crops. Caption: "I'll spray my crops with neem oil right away."

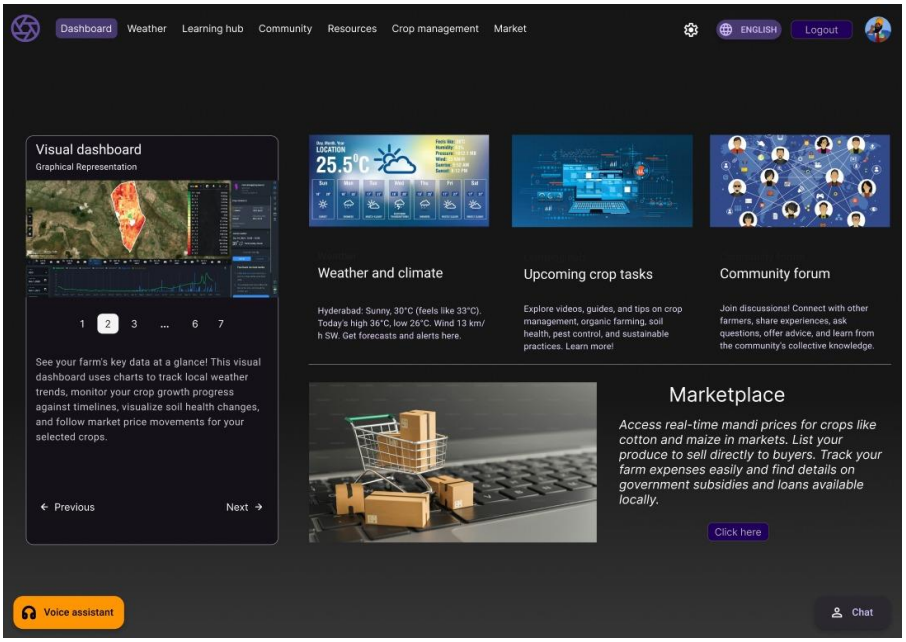

The Benefit: Farmer is happy, with healthy, pest-free crops. Caption: "The SMS alert saved my crops!"

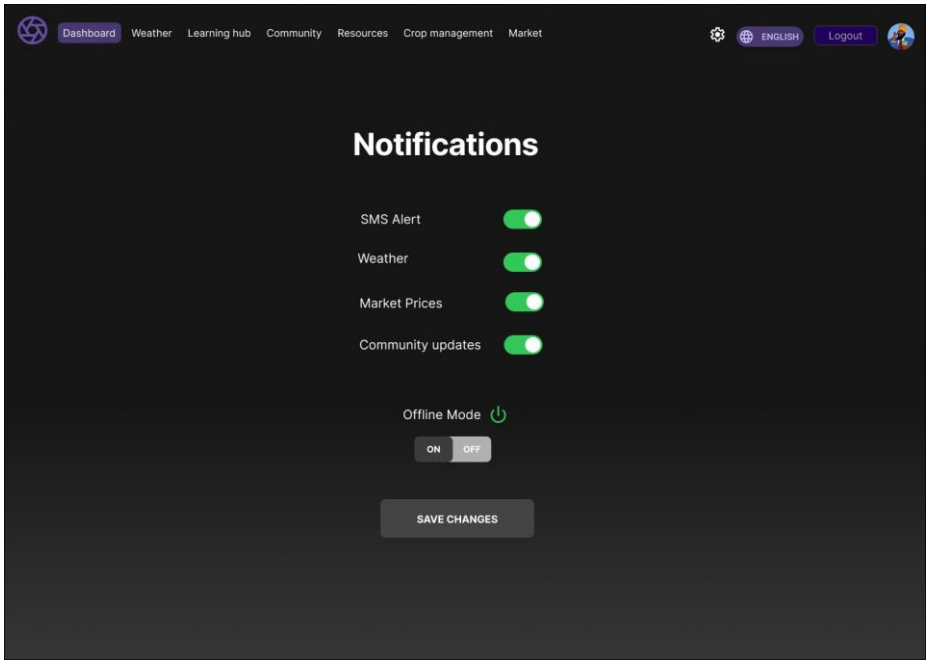

Key Elements:

Emphasize the accessibility of SMS on basic phones.

Keep the SMS message simple and easy to understand.

Show the direct impact of the SMS advice on the farmer's crops.

Use case 4 - Applying for Loans Digitally

Goal: To illustrate the ease and convenience of digital loan applications.

The Problem: Farmer looks stressed, standing in a long line at a bank or dealing with complex paperwork. Caption: "The loan process is so complicated and time-consuming!"

The Discovery: Farmer learns about a digital loan application process (maybe through an app or a government portal). Caption: "I heard I can apply for a loan online now."

The Action: Farmer uses their phone or a computer at a kiosk to fill out the loan application. The interface is user-friendly. Caption: "It's much easier to apply online."

The Approval: Farmer receives a notification on their phone confirming loan approval. Caption: "My loan has been approved!"

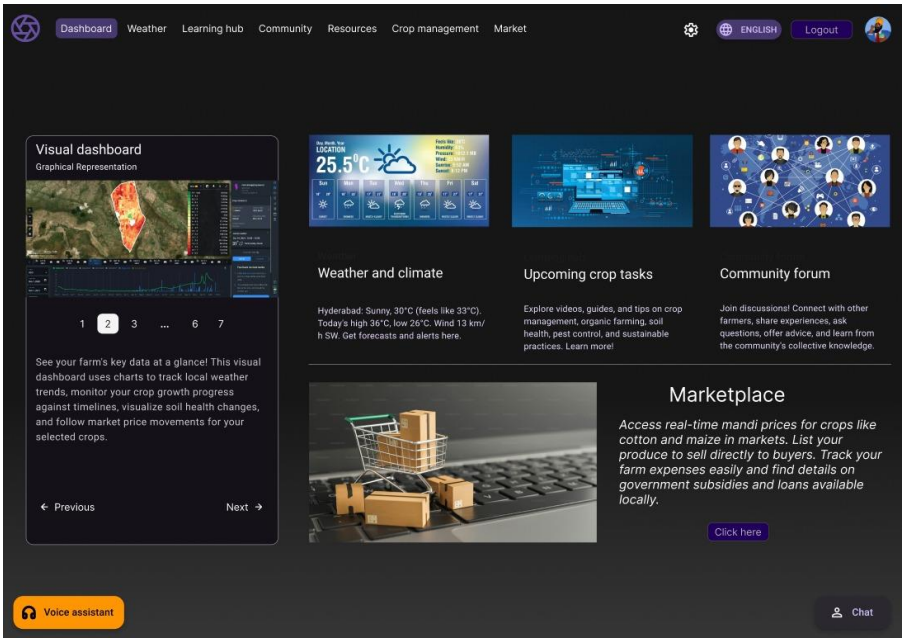

The Benefit: Farmer is shown using the loan money to invest in their farm (e.g., buying seeds, equipment). They look hopeful and productive. Caption: "Now I can buy the tools I need to improve my farm."

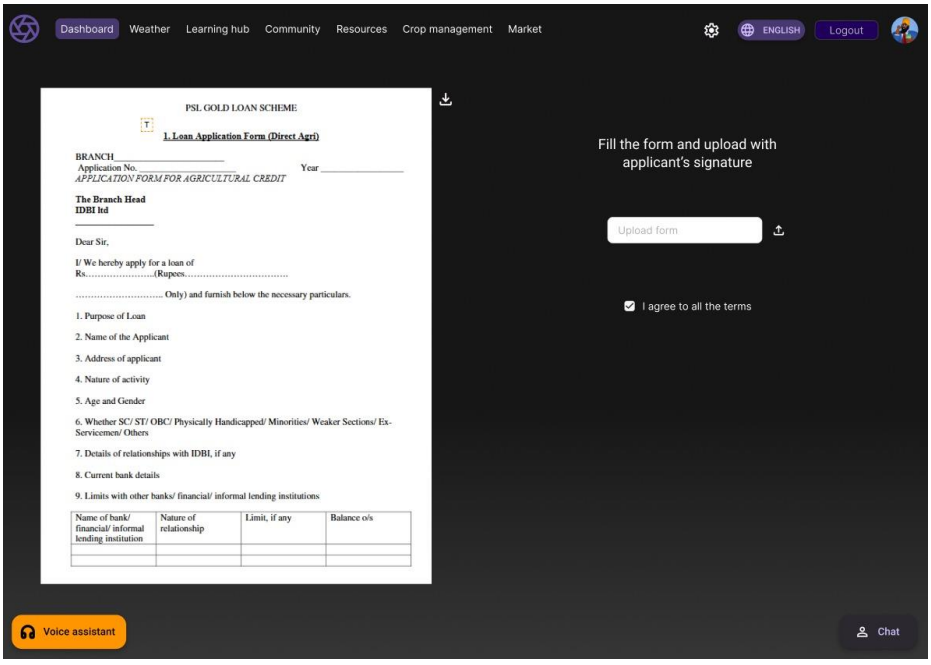

Key Elements:

Contrast the old, cumbersome process with the new, efficient digital process.

Show the simplicity of the digital interface.

Highlight how the loan empowers the farmer to improve their livelihood.

Use case 5 - Watching YouTube Tutorial

Goal: To demonstrate how farmers can learn new techniques visually.

The Problem: Farmer is struggling with a particular farming task (e.g., using a new tool, dealing with a plant disease). They look confused. Caption: "I don't know how to use this new tool."

The Discovery: Farmer discovers YouTube tutorials on farming (maybe through a search or recommendation). Caption: "Let's see if there are any videos about this."

The Action: Farmer watches a video on their phone, showing a clear demonstration of the technique. Caption: "This video explains it very well."

The Learning: Farmer is shown trying out the technique, following the instructions from the video. Caption: "Now I understand how to do it!"

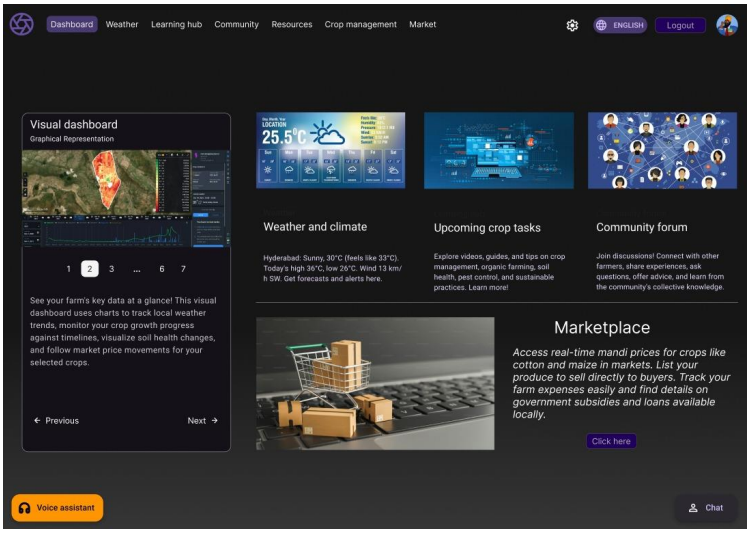

The Benefit: Farmer successfully uses the new technique, improving their farming practices. They look confident and skilled. Caption: "Thanks to the video, I can do it myself!"

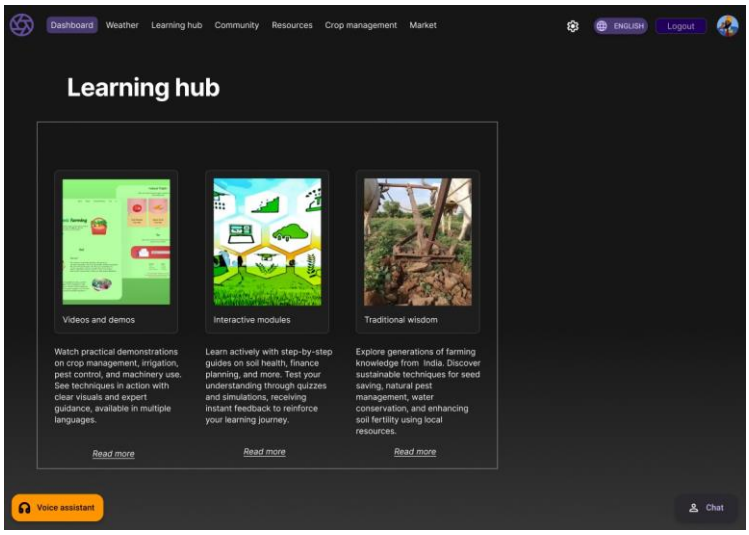

Key Elements:

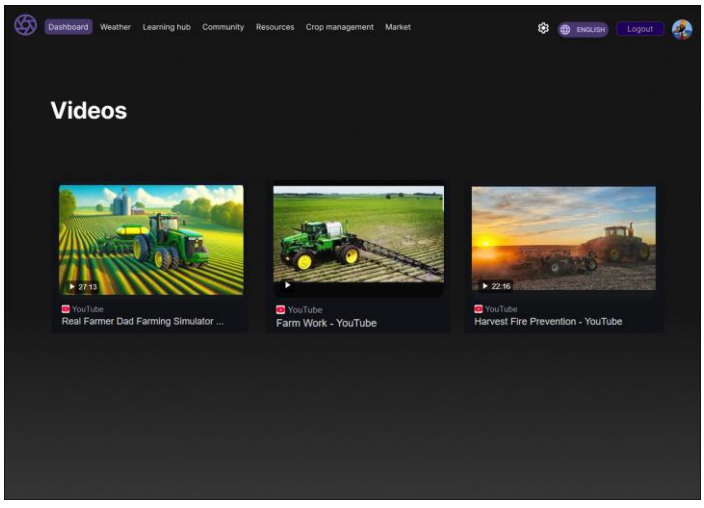

Emphasize the visual learning aspect of YouTube.

Show the farmer actively engaged in learning and applying the knowledge.

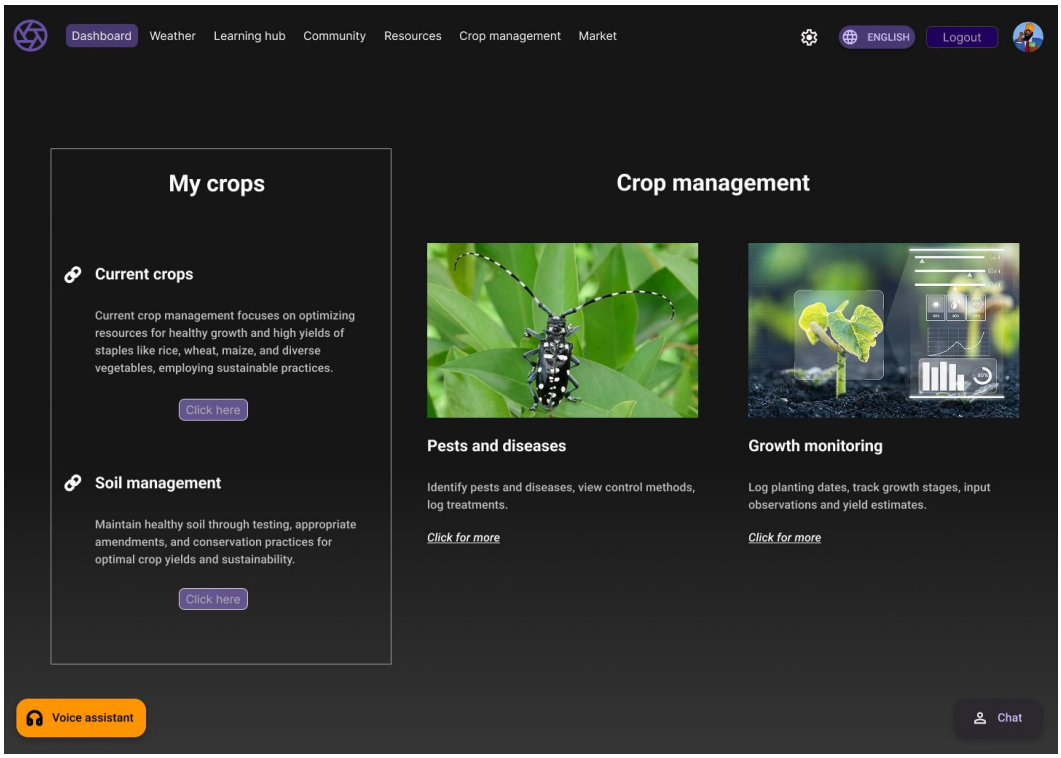

Highlight the farmer's increased skills and confidence.

Further Screens based on above mentioned usecase

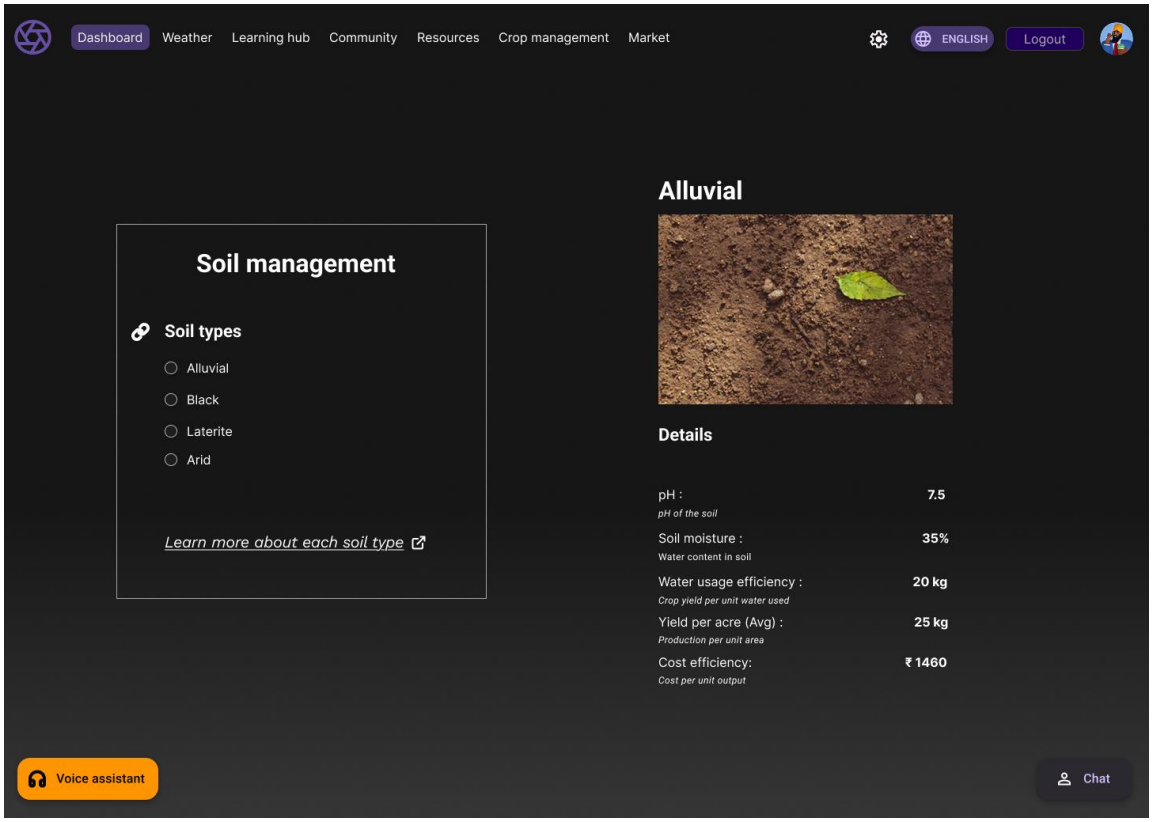

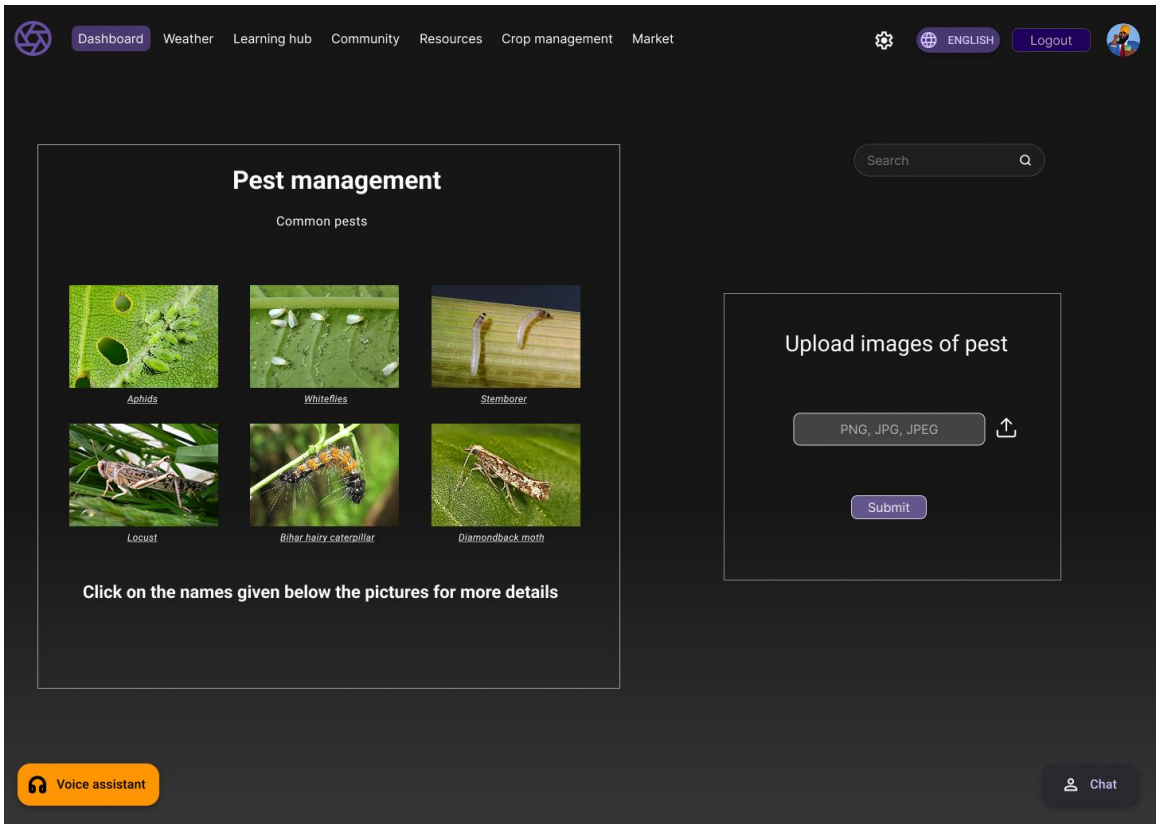

Soil type	Characteristics	Crops grown
Alluvial soil	Rich in nutrients and contain metallic ores. Dark in colour and rich in Potash and humus.	Rice, sugarcane, cotton, jute and wheat.
Black soil (Black cotton soil)	Dark grey to black in colour. Rich in calcium, magnesium, carbonate and aluminium.	Cotton, sugarcane, groundnut, rice, wheat and oilseeds.
Red soil	Sandier and less clayey. Slightly acidic and does not retain moisture. Rich in Iron and has less amount of humus.	Ragi, groundnut, millet, tobacco, potato, rice, wheat and sugarcane.
Laterite soil	Yellowish in colour. Rich in Iron and Aluminium and is used as a building material.	Coffee, cashew nut, rubber and coconut.
Desert soil	Porous and coarse. Rich in nitrates and phosphates.	Millets, barley, cactus and dates
Mountain soil	Formed by deposition of organic matter. Rich in humus.	Tea, coffee, spices and tropical fruits.

Soil textural group	*Soil textural class*	*Feel by hand texturing*
Coarse to very coarse	Sand, loamy sand	Gritty -- does not ribbon or leave a stained smear on hand.
Moderately coarse	Sandy loam	Gritty -- leaves smear on hand, does not ribbon -- breaks into small pieces.
Medium	Loam, silt loam, silt	Smooth and flour-like, does not ribbon, breaks into pieces about 1/2 inch long or less
Moderately fine	Sandy clay, sandy clay loam, clay loam, silty sandy clay loam, silty clay, clay	Forms ribbon; clays form longer ribbons than clay loams. Clay loam feels gritty.

Sandy Soil	Clayey Soil	Loamy Soil
Contains more than 60% sand and less than 10% clay.	Contains more than 60% clay.	Consists of a mixture of sand, clay, silt and humus.
Sand particle size are big. Diameter greater than 0.2 mm. They are coarse to touch.	Clay particle size are very small, Diameter less than 0.002 mm. They are smooth and sticky.	Particle size are intermediate between the two. Diameter between 0.2 mm and 0.002 mm. They are partially gritty and smooth.
Have large space between sand particles.	Have very little space between the clay particles.	The space between particles is intermediate between the two.
Sandy soil can hold air, but cannot hold much water. Not good for plant growth.	They can hold water but cannot hold much air. Not good for plant growth as soil cannot hold air for roots to breathe.	They have the right water holding capacity and are well aerated.
It is used in construction along with other cementing material	Used for making pottery idols and bricks.	Loamy soil are good for farming and gardening and is best for plant growth.

Testimonials
"Improve Farm Income"
Pally Ramchandra Reddy
"For the past two years, I am cultivating 'Money Maker' Kaveri cotton hybrid, it is giving higher yields than other hybrids. Money Maker cotton hybrid has given 20 quintals of kapas per acre. By cultivating this promising Kaveri hybrid my financial position has improved a lot. I would like to cultivate this hybrid 'Money maker' every year and I advised my fellow farmers also to raise this hybrid to reap good harvest."
"Empowering a better livelihood"
Mariappann
Recently we have cultivated Kaveri seeds Okra hybrid KOKH 1107. The difference between Kaveri and other hybrids is that, it's attractive fruit colour, quality and crop stand is excellent. Specially it's fruit picking is very easy and it has good market price.
It is best suitable for multiple pickings due to fruit bearing short internodes and gives high fruit yield. No virus incidence. Kaveri vegetable seeds have always given us good yield enabling us to improve our livelihood.
