Solution Report

Team 27: Parth Babariya, Shivendra Pratap Singh, Pavan Pachava

Problem 1: Limited Accessibility and Availability of Digital Tools

Insights from User Research

- Digital tools improve yields and efficiency, but poor internet, power outages, and high costs limit availability.
- Farmers prefer offline or SMS-based solutions due to connectivity issues.

Solution:

- Settings & Privacy - Offline mode switch to enable app functionality without internet.
- Weather Pages (Current, Forecast, Alerts) - Cached weather data and SMS notifications for offline access.
- Raise Issue - SMS and WhatsApp options for public issue reporting.

Explanation: Offline mode and cached data address internet and power challenges. SMS leverages existing mobile networks, aligning with farmer preferences and ensuring usability in rural areas.

Problem 2: Economic Barriers to Adoption

Insights from User Research

- High costs of smartphones, internet, and tools deter adoption; farmers suggest subsidies or rental models.
- Economic constraints make affordable solutions a priority.

Solution:

- Market (Subsidies & Loans) – List of schemes with summaries, "Apply" links, and status tracking.
- Market (Cost Tracker) – Tool to log and summarize expenses.
- Resources (Government Schemes) – Filterable scheme list for financial support.

Explanation: These tools simplify access to financial aid and help manage expenses. HCI ensures intuitive interfaces and action-oriented design for economic feasibility.

Problem 3: Lack of Trust in Digital Guidance

Insights from User Research

- Farmers distrust app-based advice, especially when it contradicts traditional knowledge.
- They seek feedback integration and personalized recommendations.

Solution:

- Community (Feedback) – Form for farmers to submit suggestions.
- Community (Peer Stories) – Platform for sharing success stories.
- Crop Management Pages – Localized recommendations based on user-input data.

Explanation: By showcasing peer stories and enabling personalized data input, the app builds credibility. HCI principles ensure trust and relevance through community engagement.

Problem 4: Gender-Specific Challenges for Women Farmers

Insights from User Research

- Women prefer voice-activated, simple interfaces.
- Limited mobile access and complex interfaces hinder adoption.

Solution:

- Login Page – Voice login option alongside OTP.
- Signup Pages – Voice-assisted multi-step signup in local languages.
- Learning Hub – Multimedia content (videos, voice) with simple navigation.

Explanation: Voice-assisted features reduce complexity for users with limited tech exposure. Multimedia content supports learning across literacy levels, promoting inclusive access.

Problem 5: Need for Simplified and Localized Content

Insights from User Research

- Farmers demand apps in local languages with multimedia over technical text.
- 90% emphasize regional language support.

Solution:

- Homepage – Language dropdown for public access.
- Settings & Privacy – Language customization post-login.
- Learning Hub – Videos, images, and voice messages in regional languages.

Explanation: Language support and multimedia formats help bridge literacy and comprehension gaps, making content more accessible and farmer-friendly.

Problem 6: Preference for Hybrid Farming Methods

Insights from User Research

- Farmers want digital tools to complement, not replace, traditional knowledge.
- They value AI but trust experienced farmers more.

Solution:

- Learning Hub ("Wisdom" Section) – Blends traditional and modern techniques.
- Community (Farmer Forum) – Space for peer discussions on hybrid methods.
- Crop Management (Data Visualization) – Combines AI insights with farmer logs.

Explanation: Blending data-driven insights with lived experience ensures respect for traditional knowledge while encouraging modern approaches through HCI-supported tools.

Problem 7: Slow, Peer-Driven Adoption

Insights from User Research

- Adoption is gradual, influenced by peers and younger generations.
- Younger family members guide older farmers.

Solution:

- Community (Peer Stories) – Success stories to inspire adoption.
- Community (Farmer Forum) – Peer-to-peer advice and troubleshooting.
- Homepage (Testimonials) – Highlighting real farmer voices to build credibility.

Explanation: Social proof and intergenerational learning are facilitated through relatable narratives, enabling grassroots digital adoption through community features.

Problem 8: Data Privacy and Offline Functionality Concerns

Insights from User Research

- Farmers fear data misuse and prioritize offline functionality.
- Offline compatibility is critical for rural accessibility.

Solution:

- Settings & Privacy – Privacy toggles and offline mode switch.
- Crop Management Pages – Offline logging for crop data.
- Weather (Alerts) – SMS alerts for offline updates.

Explanation: Data control and offline features reinforce farmer trust and practical usability in areas with limited internet access.
